Let's start...

Digital Transformation is built on APIs

Essence of API management

Facade

Hide backends from frontends

Move backends without impacting frontends

Re-architect backends without impact on frontends

Expose a subset of backend capabilities

Aggregate or slice backends into APIs

Modernize legacy backends

Decouple frontend developers with mocks

Front door

Single point of ingress

Route

Authenticate

Authorize

Throttle

Transform

Trace

Meter

Frictionless consumption

Self-service user onboarding

Discover APIs

Learn how to use APIs

Try APIs without writing any code

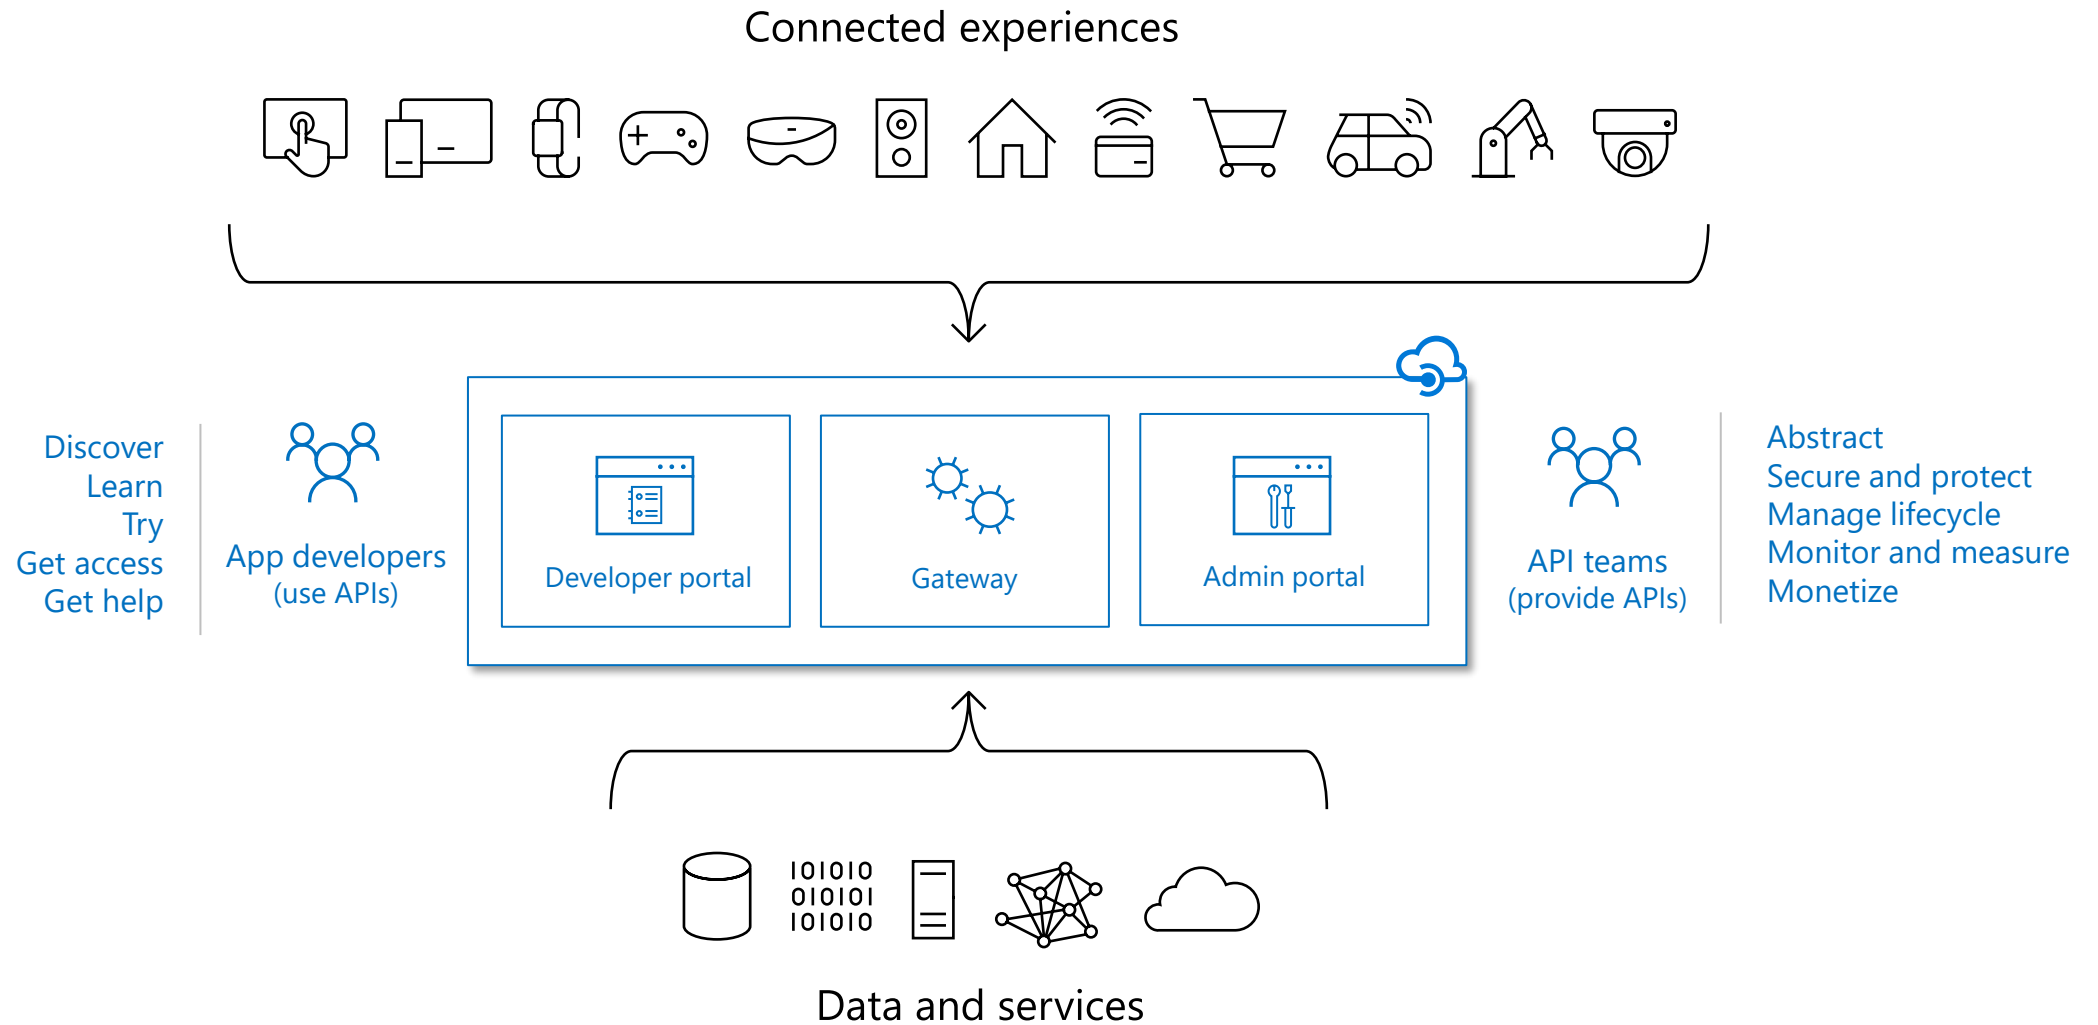

Request and receive access to APIs

Download API specs, samples, and SDKs

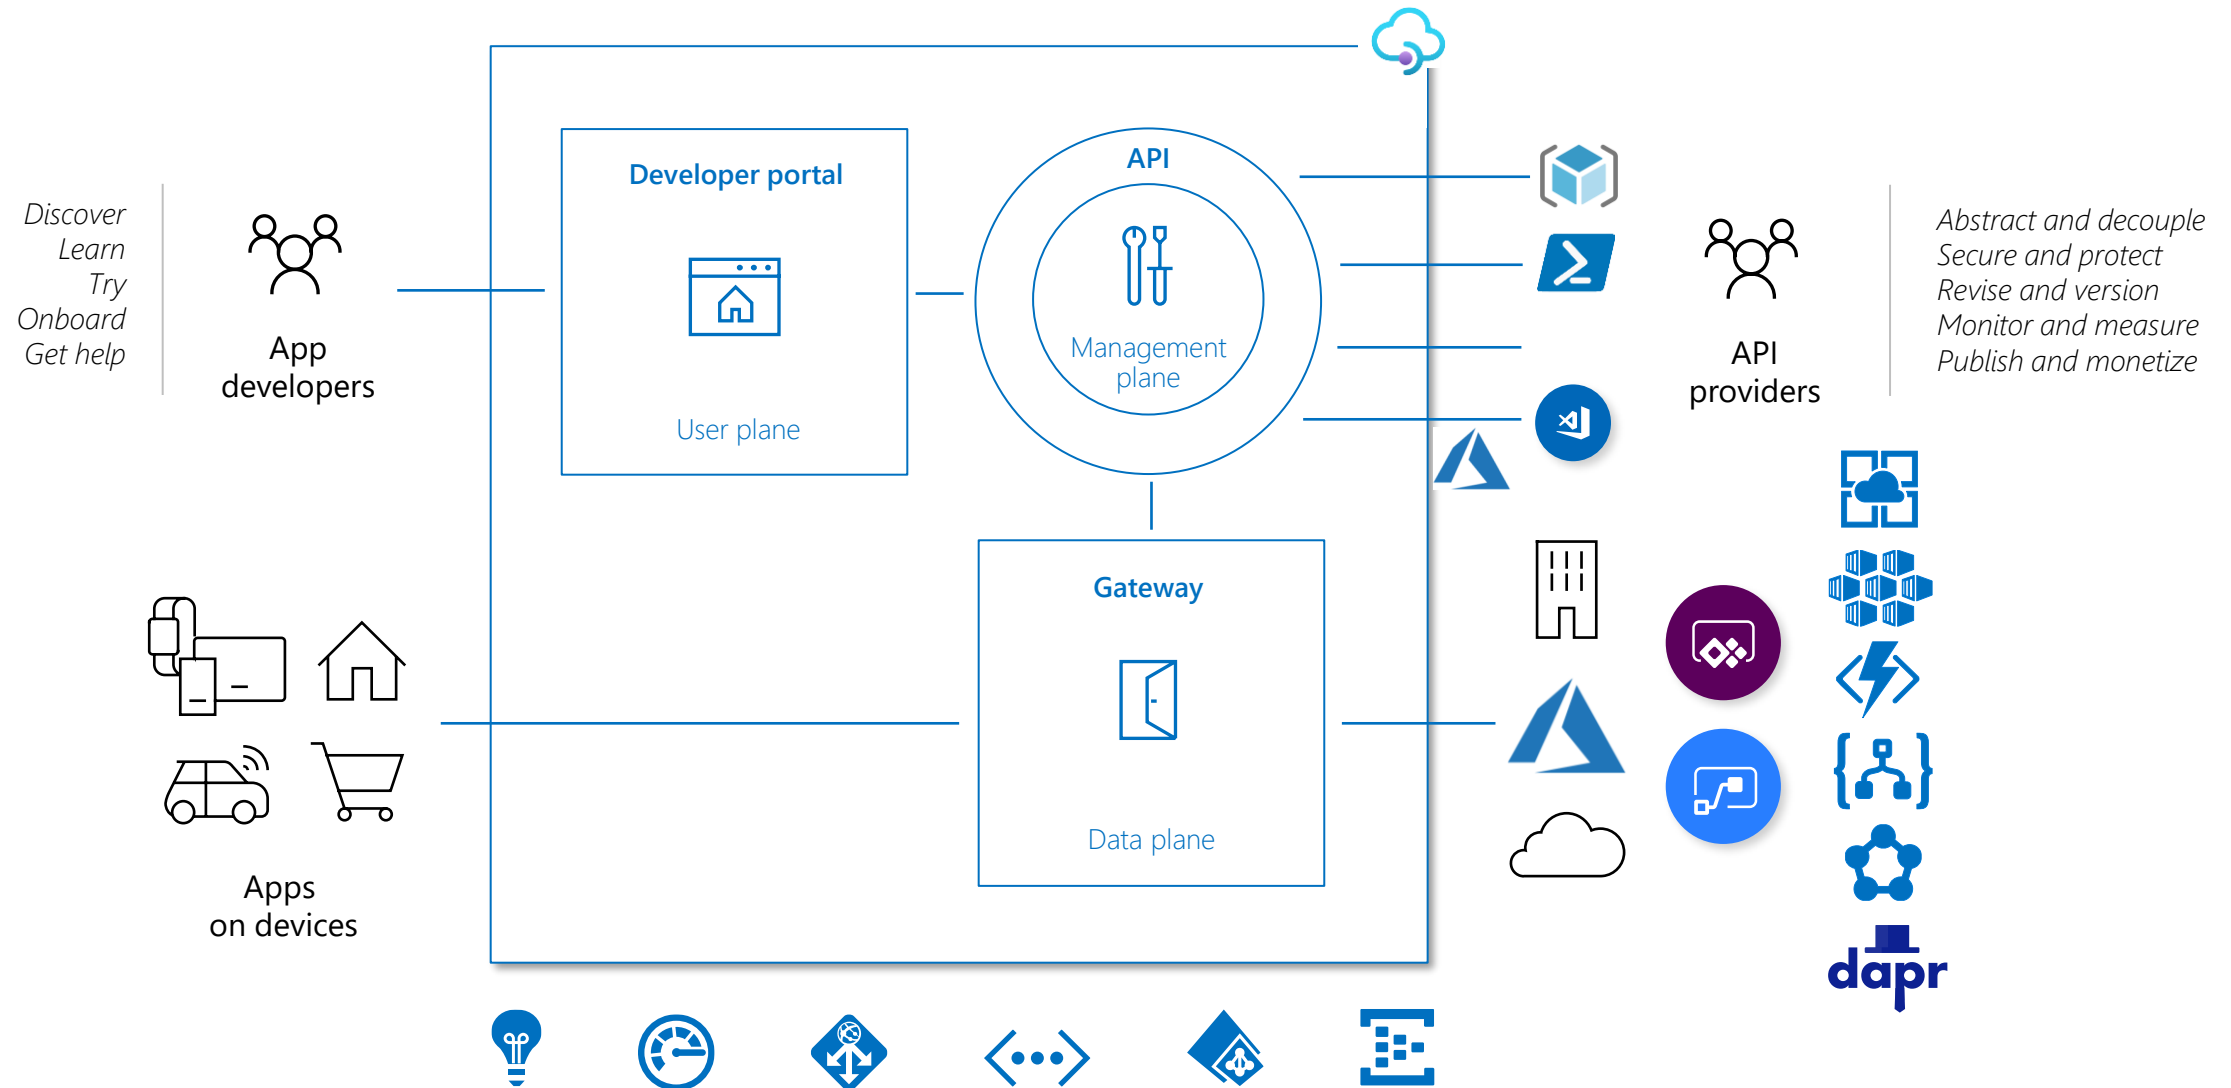

Interact with the API provider

Get usage reports

API management solves API-related challenges

Azure API Management

Value proposition

-  Mature full life cycle API management solution
-  Abstract, secure, observe, and make APIs discoverable in minutes
-  One solution for APIs across clouds and on-premises
-  Dependable, secure, scalable, and performant
-  DevOps- and developer-friendly
-  Azure-native and integrated with other Azure services
-  Globally available and supported
-  Low-barrier-to-entry pricing

Top scenarios for API Management

Cloud migrations

Replacement for API management solution used on-premises
Reach-back to on-premises APIs

Cloud-born apps

App modernization and cloud-native apps
API gateway for PaaS, container and serverless-based microservices

IoT solutions

Management of control plane APIs

Big Data platform

Management of reporting and insights APIs

Two-speed IT

Digital transformation
Enterprise-wide API catalog and governance

Pricing

Region:

West Europe

Currency:

Euro (€)

Display pricing by:

Hour

Pricing details

	CONSUMPTION	DEVELOPER	BASIC	STANDARD	PREMIUM	ISOLATED ^{PREVIEW}
Purpose	Lightweight and serverless version of API Management service, billed per execution	Non-production use cases and evaluations	Entry-level production use cases	Medium-volume production use cases	High-volume or enterprise production use cases	Enterprise production use cases requiring high degree of isolation
Price (per unit)	€2.95155 per million calls (1M calls free ³)	€0.06/hour	€0.18/hour	€0.80/hour	€3.23/hour	TBA ⁸
Cache (per unit)	External only	10 MB	50 MB	1 GB	5 GB	5 GB
Scale-out (units)	N/A (automatic scaling)	1	2	4	10 per region (call support to add more)	10 per region (call support to add more)
SLA	99.95%	No	99.95%	99.95%	99.99% ¹	99.99%
Isolation	Shared	Private	Private	Private	Private	Private

There is a policy for that

Encapsulate common API management functions

Access control, Protection, Transformation, Caching, ...

Mutate request context or change API behavior

E.g. add a header or throttle

Set in the inbound and outbound directions

Applied at a variety of scopes or on error

Scope determines which APIs are affected

Can define custom scopes in addition to four available by default

Composed into a pipeline from effective scopes

Degree of control over inheritance of scopes, i.e. <base/> element

Don't delete <base/> inadvertently

<http://aka.ms/apimpolicyexamples>

Cross domain policies

- + Allow cross domain calls
- + CORS
- + JSONP

Authentication policies

- + Authenticate with Basic
- + Authenticate with client certificate

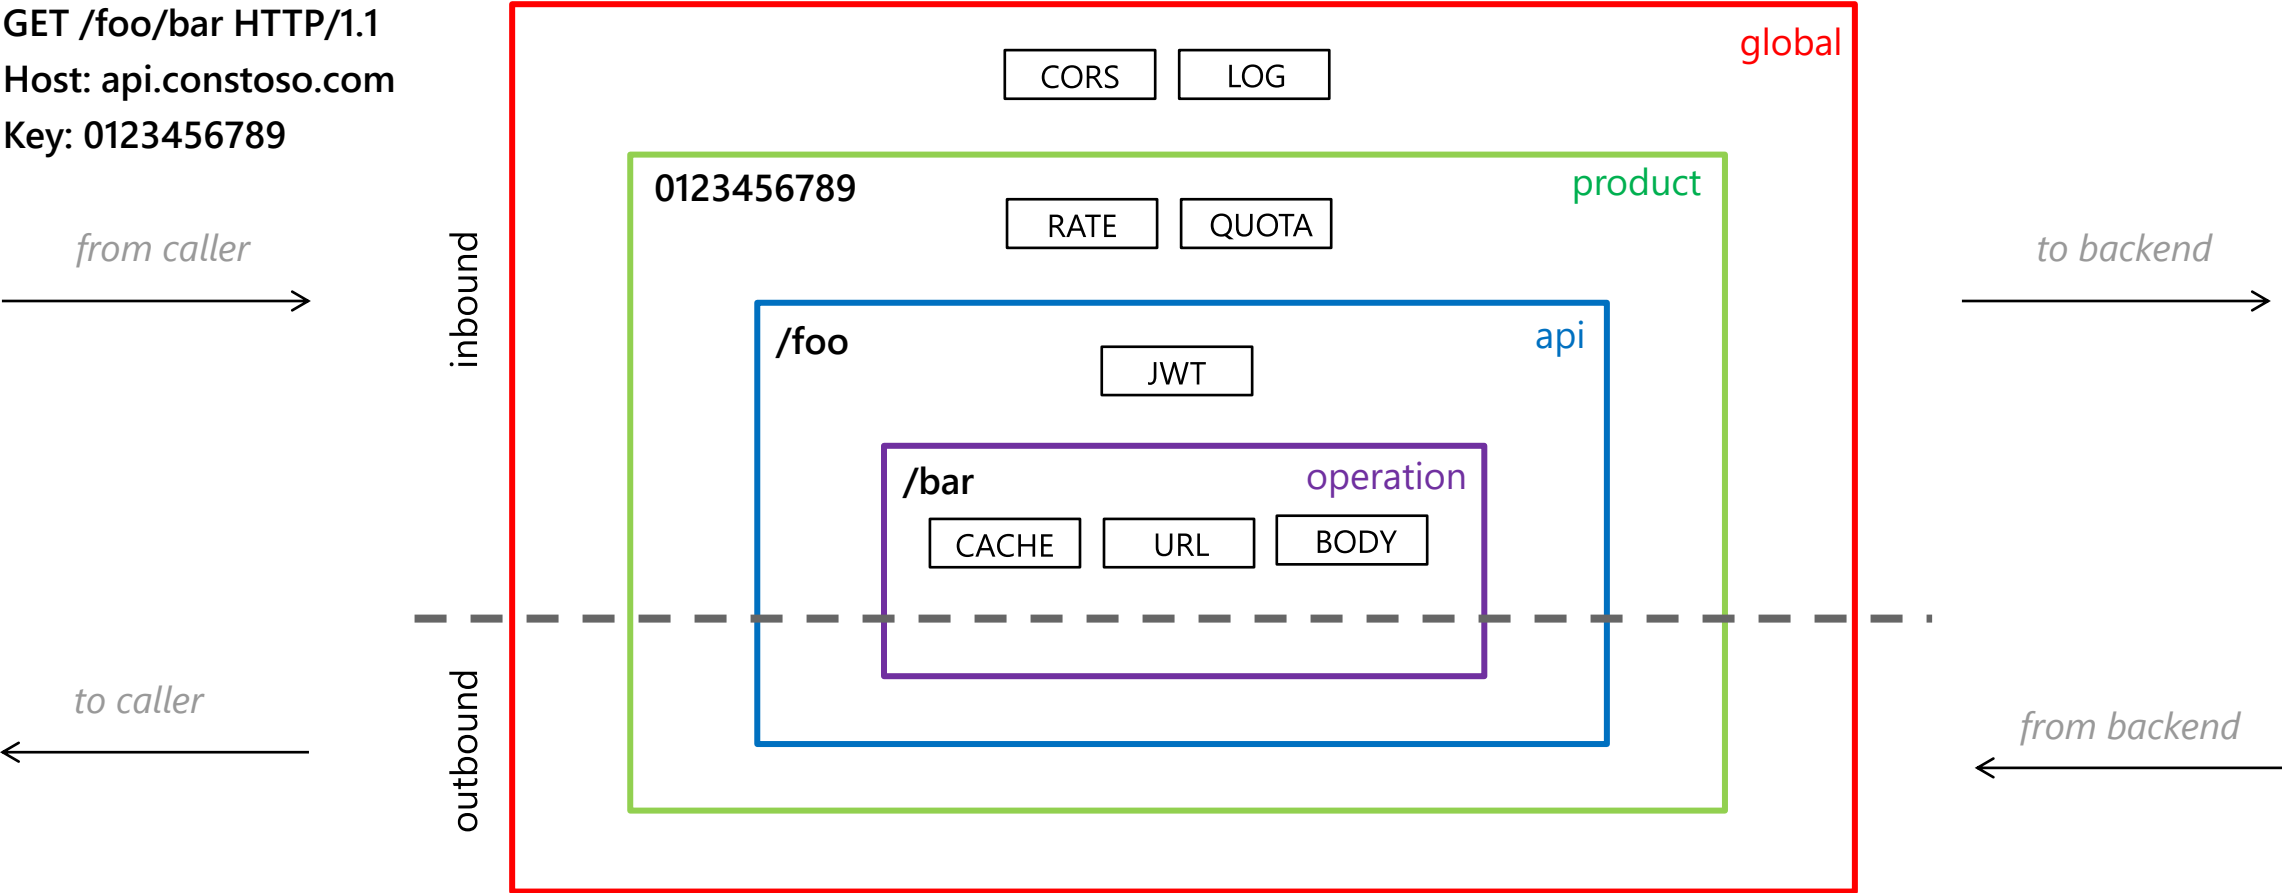

Access restriction policies

- + Check HTTP header
- + Limit call rate per key
- + Limit call rate per subscription
- + Restrict caller IPs
- + Set usage quota per key
- + Set usage quota per subscription
- + Validate JWT

Calculate effective policy

Policy scopes

GET /foo/bar HTTP/1.1
Host: api.constoso.com
Key: 0123456789

Target use cases for the Consumption tier

- [Gateway for serverless microservices](#)
 - Functions and Logic Apps
- Simplified and secure façade for serverless resources
 - Instant Provisioning, Automated scaling, per action pricing
- Entry-level API management for breadth customers
- Gateway for traditional backends with highly spiky traffic
- Non-production environments and evaluations

Versions and revisions

Versioning is an opt-in
Versions are represented at the system level
Choice of versioning scheme options
Versions are reflected on the developer portal
Control over when the versions are published

Revisions

Providers choose
when to deploy

Versions

Consumers choose
when to adopt

"I found this approach refreshing, as it provides a more pragmatic approach to API versioning while steering clear of semantic versioning that doesn't necessarily map directly to HTTP-based APIs."

From "A guide for when (and how) to version your API"
<https://tyk.io/blog/guide-version-api/>

Self-hosted API Gateway

Self-hosted API gateway

Deployable to on premises or to a cloud

Functionally equivalent to the managed gateway
Packaged as a Linux-based Docker container image
Available from the Microsoft Container Registry

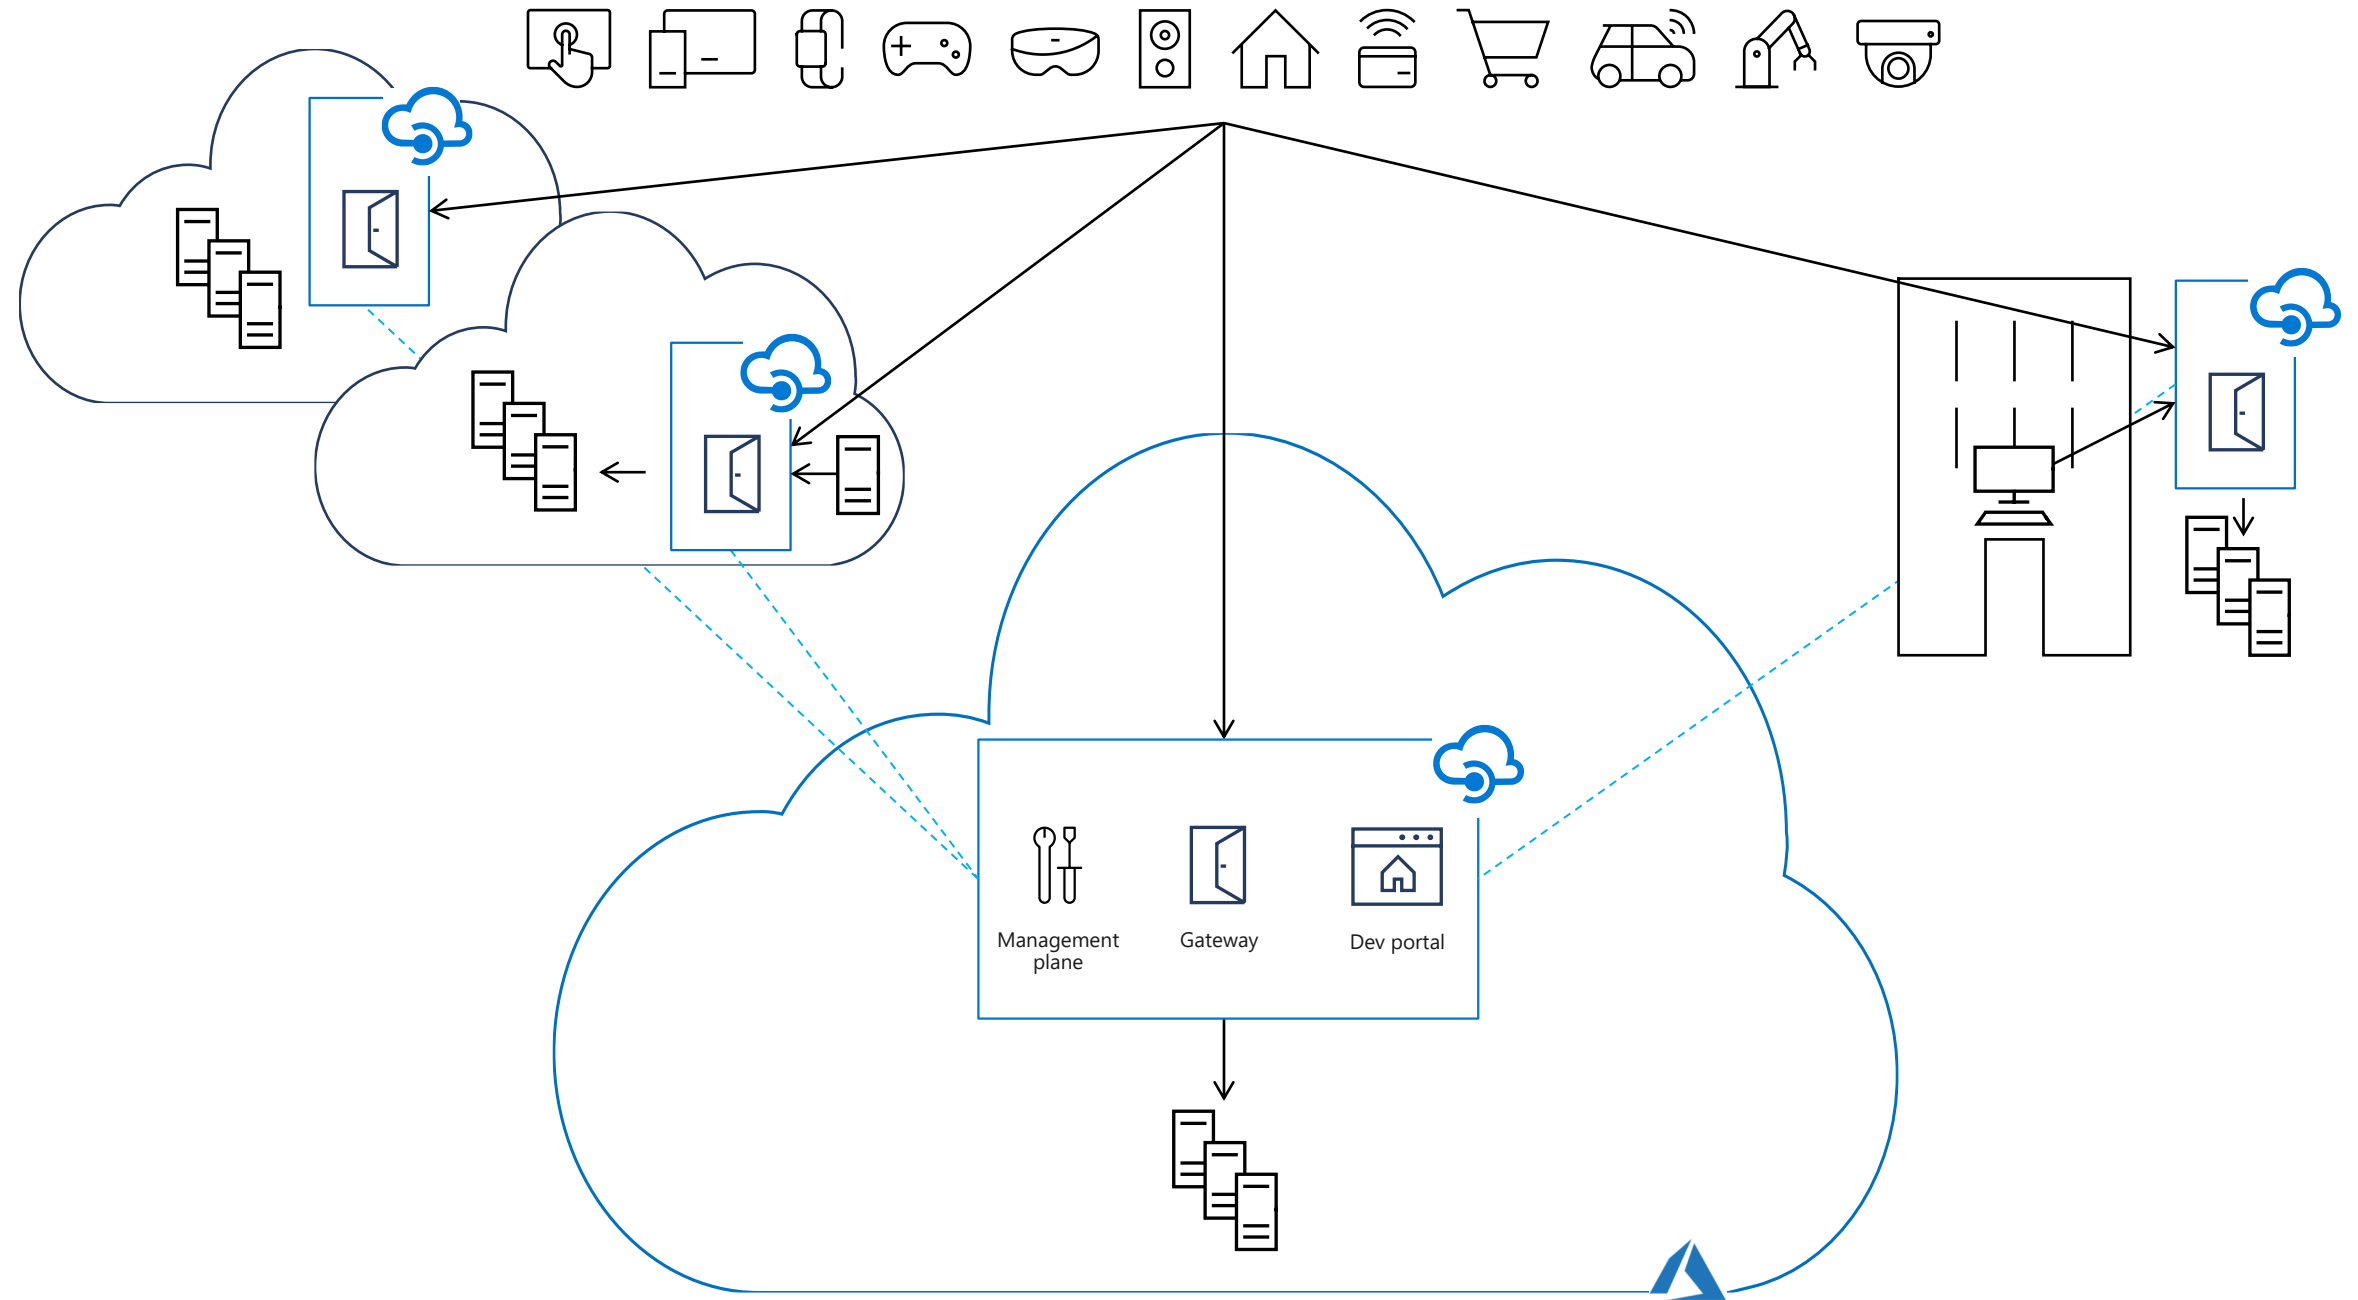

Managed and observed from Azure

Requires only outgoing connectivity to Azure on port 443
Connects to a "parent" API Management service
Pulls down configuration and pushes up telemetry

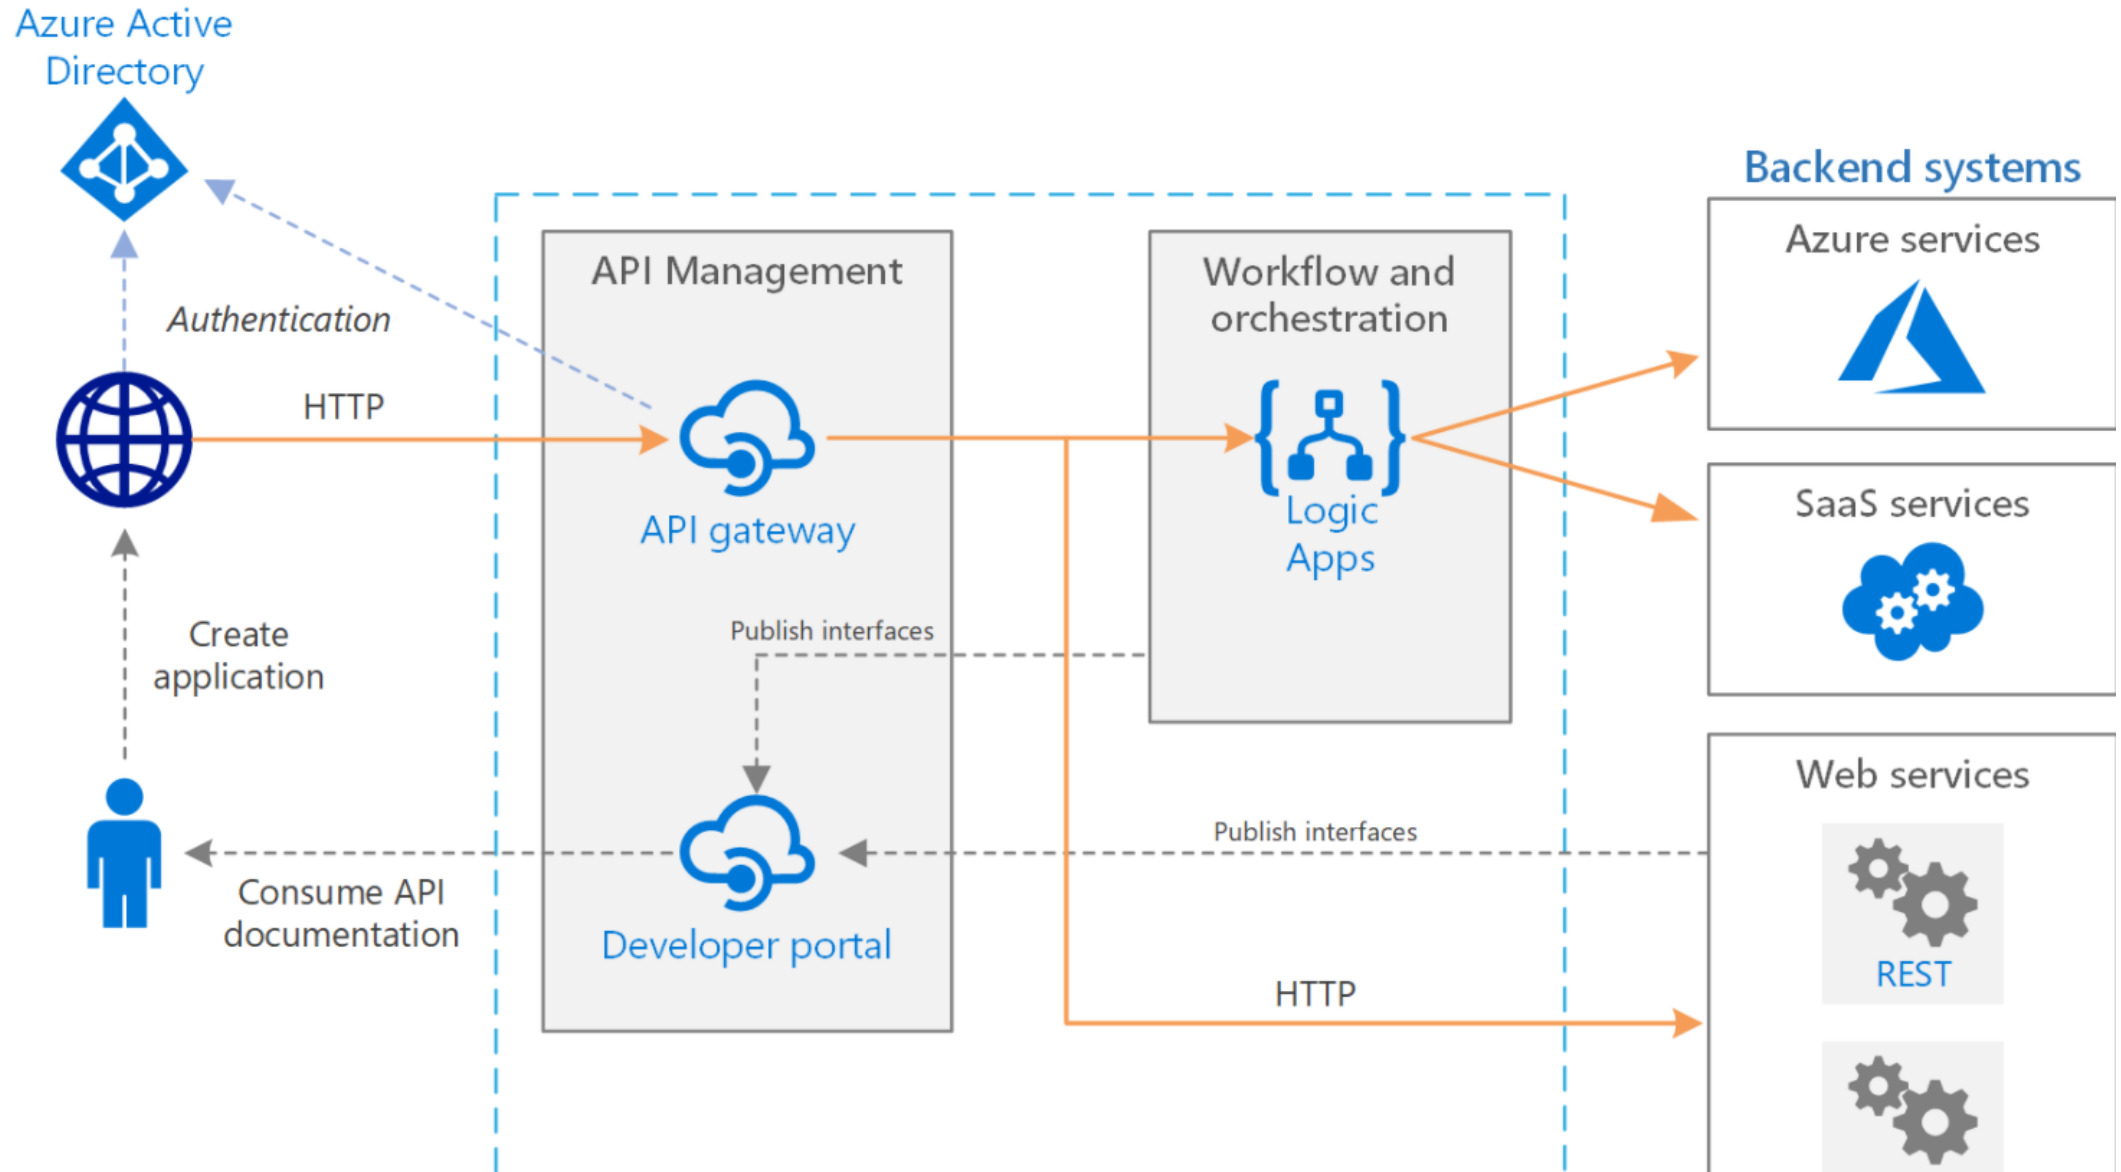

Simple to provision and operate

Just a single container
Easy to evaluate on a laptop with Docker Desktop or Minikube
Kubernetes provides availability, scaling, rolling upgrades, and more

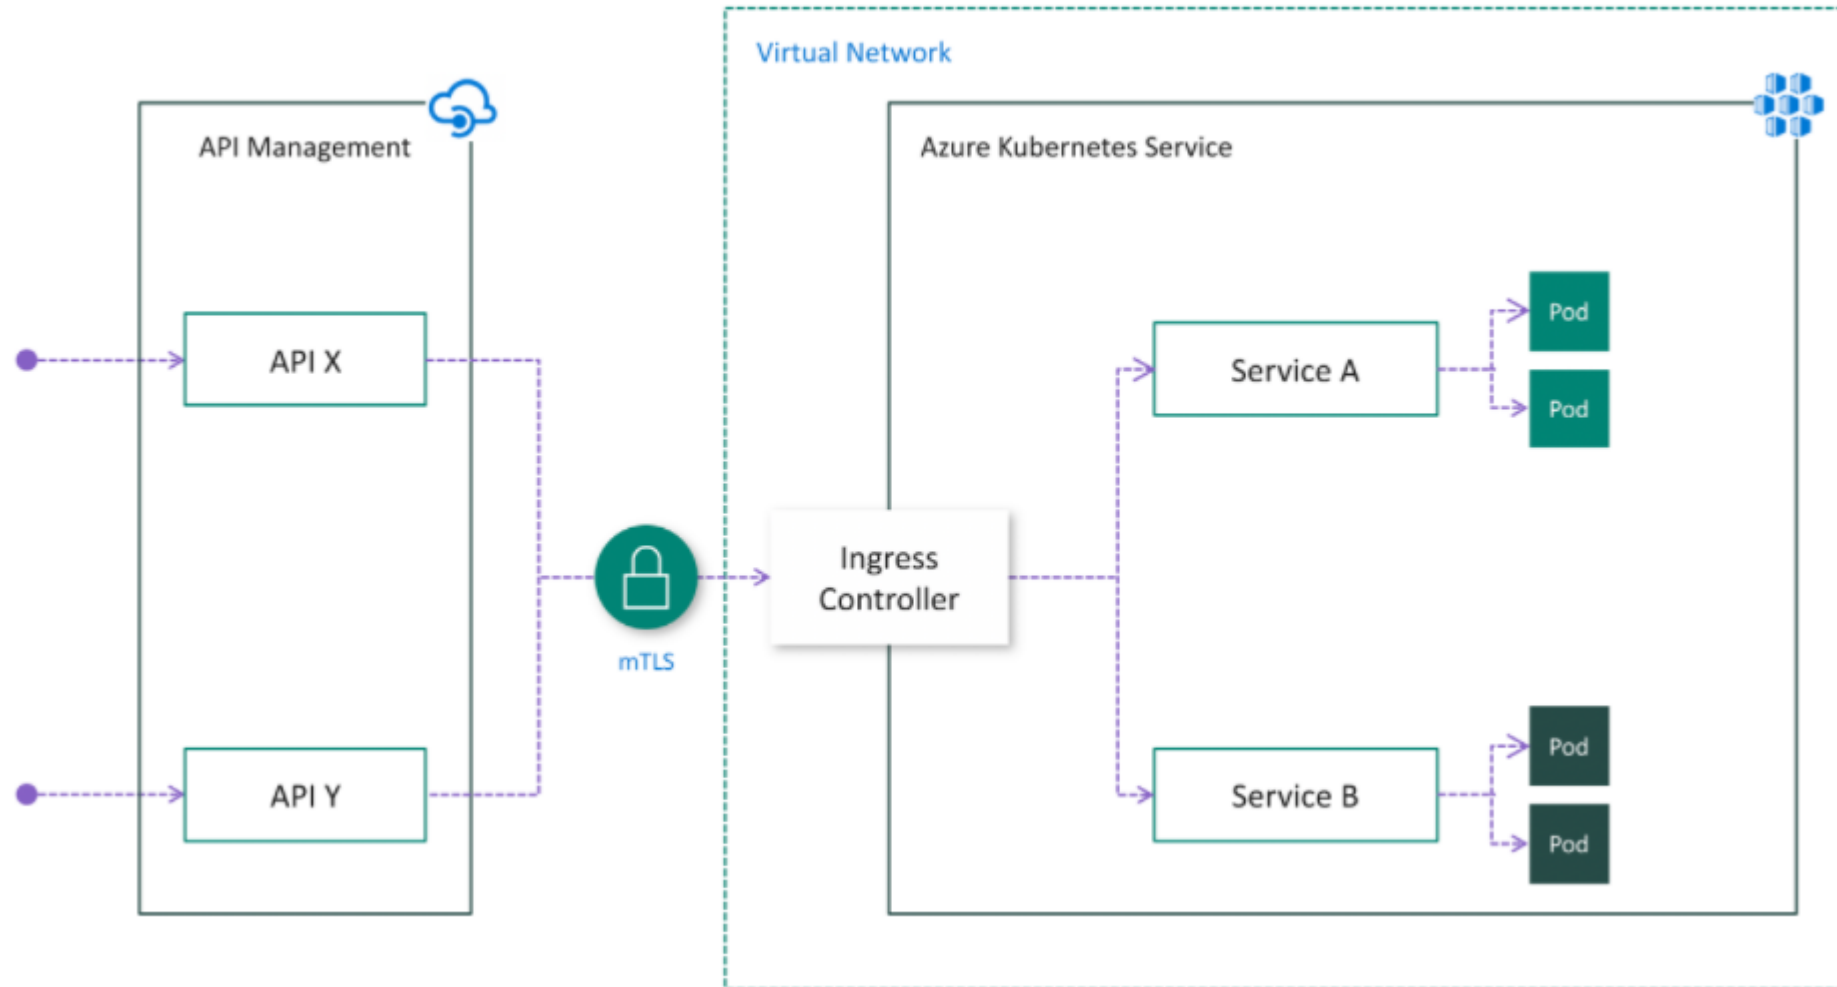

Sample architecture

Basic Enterprise integration

API Management in front of AKS

This architectural diagram shows just one of multiple options. Please review the documentation and select the best for your solution.
